API Documentation

AZ-ZAHRA GALUH MAS
MANASIK CENTER

Last Updated: 11 Januari 2023

1. **Check the participant's ticket code number**

   Used to check whether the scanned ticket code number data exists or not, and update the status to scanned if the data is valid

   URL and Method

Endpoint	https://azzahra-galuhmas.com/api/check_participant
Method	GET

   Parameters

Key	Value	Description	Type	Required
azzahra_transaction_token	t3YQ8R5vQu1Obsu	token used for authentication, its value will not change	String	Required
ticket_code_number	(from the scanned ticket) example: 1234567	the ticket code number number obtained when scanning	String	Required

```
curl --request GET \

  --url 'https://azzahra-
galuhmas.com/api/check_participant?azzahra_transaction_toke
n=t3YQ8R5vQu1Obsu&ticket_code_number=1234567'
```

   Response Status:

Status	Description
200	Success, the ticket code number was successfully redeemed
403	Failed, the ticket code number has been redeemed or arrival date does not match or invalid transaction data
406	Failed, no mathing data
500	Server error (An unspecified error has occurred)

1.1 All sample responses

2. Status 200

```
{
	"status": 200,
	"message": "Success, the ticket code number was successfully redeemed",
	"data": {
		"transaction": {
			"id": 5,
			"transaction_code": "TRX-AZZAHRA-107122022-
NTCPYqk0cYHTcpnquUfZ",
			"referral_code_id": null,

```

3. Status 403

```
{
	"status": 403,
	"message": "Failed, the ticket code number has been redeemed"
}
```

OR

```
{
	"status": 403,
	"message": "Failed, arrival date does not match"
}
```

OR

```
{
	"status": 403,
	"message": "Failed, invalid transaction data"
}
```

4. Status 406

```
{
        "status": 406,
        "message": "Failed, no matching data"
}
```

5. Status 500

```
{
        "status": 500,
        "message": "Server Error"
}
```

1.2 Responses Detail

JSON Attribute	Type	Description
status	Integer	Status code that describes the state of the results of the API request. Possible values are '200', '403', '406', and '500'.
message	String	A message that describes the state of the result of the API request.
transaction	Object	The details of the specific transaction such as transaction_code and arrival_date.
transaction_code	String	Unique transaction code.
referral_code_id	Integer	Referral code id used.
customer_id	Integer	Customer id.
arrival_date	Date	Arrival date to Azzahra.
total_ticket	Integer	Number of tickets purchased.
ticket_price	Integer	Price per ticket
muthawif_fee	Integer	Muthawif fee (Muthawif = guide)
referral_code_discount	Integer	Total referral code discount
total_price	Integer	Total price paid.
type	String	Ticket type. Possible values are 'Weekend' and 'Weekday'.
with_muthowif	Tinyint	Status with Muthowif or not. Possible values are '0' and '1'. '1' for true, and '0' for false
payment_method	String	Payment method used. Possible values are 'Bank Transfer' and 'Credit Card'.
bank	String	Bank name used for payment.
credit_card	String	Credit card number if using a credit card.
virtual_account	String	Virtual account number if using the bank transfer payment method.

description	Text	Transaction description.
status	Tinyint	Transaction status. Possible values are ‘0’ = invalid, ‘1’ = settlement, ‘2’ = pending, ‘3’ = cancel, ‘4’ = expire, ‘5’ = deny, and ‘6’ = failure. only status ‘1’ is accepted
transaction_detail	Object	Details of the item purchased by the customer.
transaction_id	Integer	Transaction id.
ticket_code_number	String	Unique ticket code number on each ticket item.
name	String	Ticket holder name.
is_redeemed	Tinyint	Ticket status has been redeemed/scanned. Possible values are '0’ = false, and ‘1’ = true.

2. Check the ticket status

Used to check whether the ticket code number data is valid or not

URL and Method

Endpoint	https://azzahra-galuhmas.com/api/check_ticket
Method	GET

Parameters

Key	Value	Description	Type	Required
azzahra_transaction_token	t3YQ8R5vQu1Obsu	token used for authentication, its value will not change	String	Required
ticket_code_number	(from the scanned ticket) example: 1234567	the ticket code number obtained when scanning	String	Required

```
curl --request GET \

  --url 'https://azzahra-
galuhmas.com/api/check_ticket?azzahra_transaction_token=t3Y
Q8R5vQu1Obsu&ticket_code_number=1234567'
```

Response Status:

Status	Description
200	Success, the ticket code number is valid
403	Failed, the ticket code number has been redeemed or arrival date does not match or invalid transaction data
406	Failed, no mathing data
500	Server error (An unspecified error has occurred)
